Type: Enterprise	Title: Poetry Discord Bot	Status: X	RI: E1

Context: This is my first freelance commission; I am tasked to create a discord bot with a simple one-off function that optimally queries fixed data of poetry prompts and posts it in a channel as regular text modified with markdown syntax. There is a potential oversight of faulty manual inputs (e.g., wrong formatting of poetry prompts) to which an extra step is made of making a dashboard webapp to alter back-end data.

Core Decision: Create a discord bot that automates sending a quotidian poetry prompt through a one-off command

Prospects	Decision Parameters	0TD Concerns

• A **specific** user can invite the discord bot to their private guild
• A user can use the bot to designate a channel to begin a day-interval prompter
• A database to store preset prompts
  – No more than 1MB is used unless manually modified
  – Utilizes an efficient schema
• Rate limiting considered
  – Minimize querying requests from database
  – Prevent exceeding discord's rate limits
